

Step By Step

1. App Information

- Name: Ingredia
- Subtitle, Norwegian: Skann matvarer mot allergiprofilen din
- Subtitle, English: Scan food against your allergy profile
- Primary category: Food & Drink
- Secondary category: Health & Fitness
- Content rights: choose that you have rights to the app content. Avoid showing copyrighted product images prominently in marketing unless you are comfortable with that.

2. Pricing and Availability

- If the app has no payments: choose Free.
- Availability: start with Norway if you want a controlled first release, or all countries if the data/language experience is ready internationally.

3. App Privacy

Fill this very carefully:

- If allergy profiles, scan history, and settings stay only on device: do **not** mark them as collected.
- If you send only barcode numbers to Open Food Facts/Food Repo: disclose network/product lookup behavior if Apple asks, but it may not be “data collected from the user” unless you store/link it.
- If you collect no analytics, accounts, location, email, or tracking: choose no tracking and no data collected by you.
- Add a privacy policy URL anyway. For this app, you should have one because it deals with allergy-related preferences.

4. Age Rating

Likely 4+, assuming there is no user-generated content, web browsing, gambling, alcohol promotion, etc. Answer Apple’s questionnaire truthfully.

5. App Review Information

- Contact info: your real name, phone, and email.
- Demo account: Not required if the app works without login.
- Notes for reviewer:

_*****

Ingredia scans product barcodes and compares available product data with a local allergy profile. The app is informational only and clearly tells users to verify packaging, allergen labels, and manufacturer information before eating a product. No login is required.

_*****

6. Version Page

- Version: 1.0.1
- Build: select uploaded build 1
- What's New, Norwegian:

_*****

Første App Store-versjon av Ingredia med strekkodeskanning, allergiprofil, produktvurdering, historikk og restaurantkort.

_*****

- What's New, English:

_****

First App Store release of Ingredia with barcode scanning, allergy profiles, product assessment, history, and restaurant cards.

_****

Suggested App Store Description

Norwegian:

_****

Ingredia hjelper deg med å sjekke matvarer mot allergiene og intoleransene dine.

Skann strekkoden på et produkt, hent tilgjengelig produktinformasjon og få en rask vurdering basert på profilen din. Appen kan også vise ingredienser,

registrerte allergener, sporadvarsler, datakvalitet og mulige bedre alternativer når relevante produkter finnes.

Funksjoner:

- Opprett én eller flere allergiprofiler
- Skann strekkoder på matvarer
- Se vurdering mot valgte allergener og intoleranser
- Lagre tidligere skanninger
- Få forslag til bedre alternativer når tilgjengelig
- Vis restaurantkort på norsk, engelsk eller thai
- Velg om sporadvarsler skal behandles som uakseptable

Ingredia er et støtteverktøy, ikke en medisinsk garanti. Les alltid emballasjen, ingredienslisten, allergenmerkingen, sporadvarsler og produsentens siste informasjon før du spiser et produkt.

Screenshots To Use

Use **6 screenshots**. That is enough and looks professional.

1. Home screen with "Skann produkt"
2. Profile screen with selected allergens/intolerances
3. Scanner screen with barcode frame
4. Product result showing assessment, ingredients, allergens, and disclaimer
5. Better alternatives section
6. Restaurant card screen

Optional extras:

7. History screen

8. Settings/language screen showing Norwegian, English, Thai

For the screenshots, use the same language as the App Store localization:

- Norwegian listing: screenshots in Norwegian
- English listing: screenshots in English
- Thai listing: screenshots in Thai

Screen Recording / App Preview

I would skip it for the first submission unless you already have time to make it polished. Screenshots are enough.

If you do make one, record about **15-25 seconds**:

1. Open Ingredia
2. Tap scan
3. Show barcode scan
4. Show product assessment
5. Switch to restaurant card

Do not include personal info, medical claims, or anything that says the app guarantees safety. Keep the message factual: it helps users check product data, but packaging must always be verified.
